Dyson Supersonic™ hair dryer

Some attachments may not be included.

You can buy additional attachments at www.dyson.com.

Styling concentrator
Attachment with flat, wide nozzle.

Gentle air attachment
A flat nozzle with a rippled texture.

Diffuser
A large, wide, circular nozzle with prongs on the inner surface.

Wide-tooth comb
An attachment with long straight comb prongs.

Flyaway attachment
A flat, hook-shaped nozzle.
Getting started

Airflow control
3 precise settings.

The airflow control button is located on the back, left hand side of the cylindrical head of the hair dryer.

Power on/off
Sliding switch.

The power button is located on the back, at the top of the handle. It is a slider button that pushes upwards and downwards.

Cold shot
Press and hold to deactivate heat and set style.

The cold shot button is located on the back of the handle of the hair dryer, just below the power button.

Air inlet

The air inlet is covered by the filter and is located at the bottom of the handle.

LEDs

The LED lights are located on the back of the cylindrical head of the hair dryer. They are above both the airflow and temperature buttons. There are three LED lights of each side which light up as the corresponding button is pressed. These lights also indicate that your filter needs cleaning or that there is a fault.

Temperature control
4 precise heat settings.

The temperature control button is located on the back, right hand side of the cylindrical head of the hair dryer.

Removable filter cage
Easy to remove for cleaning.

The filter cage is located at the bottom of the handle.
LEDs

Settings
The LED lights indicate which settings you are using.

Diagnostics
The LEDs will flash continuously to let you know that your machine needs attention.

Clean the filter. Follow the instructions or watch the video at dyson.com/yoursupersonic.

If all three red lights continue to flash, contact the Dyson Helpline.
Don’t turn back on.
Using your hair dryer

Your Dyson Supersonic™ hair dryer has magnetic styling attachments, for easy fitting and rotation during styling.

Remove your attachments using the cool edges.

Heat Shield technology keeps the surface of your styling attachments cool.

**Styling concentrator**
Wide and thin for precision styling.

**Diffuser**
Even diffusion to help define curls and reduce frizz.

**Gentle air attachment**
Cooler, gentle drying for fine hair and delicate scalps.

**Wide-tooth comb**
Engineered for curly and coily hair. Lengthen hair completely, or tease out curls just a little bit.

**Flyaway attachment**
For a smoother finish. Attracts longer hairs and hides flyaways using the Coanda effect. For use only on dry and straightened hair.

Attachment with flat, wide nozzle.

A large, wide, circular nozzle with prongs on the inner surface.

A flat nozzle with a rippled texture.

An attachment with long straight comb prongs.

A flat, hook-shaped nozzle.
Regular filter cleaning

Check your filter is clear from hair product residue and debris monthly, or when the LED lights alert you.

Maintaining performance
Unplug your machine from the mains electricity supply and allow to cool down before cleaning your filter.

The Dyson Supersonic™ hair dryer has highly tuned technology to give outstanding performance.

This technology needs to be kept free from dust and hair product residue. Maintenance is required to maintain performance.

Step 1
Hold the handle of your machine firmly and gently rotate the filter cage counter-clockwise.

Step 2
Pull down and away from the machine. Use a lint-free cloth or soft brush to remove any dust or debris from both the filter cage and the filter mesh.

Step 3
Don’t use water to clean the filter mesh. Don’t apply too much pressure to the filter mesh.

Step 4
Rotate the filter cage back into position until correctly aligned.

Rotate clockwise to lock before use.
