In the box

Your machine will come with one or more of these cleaner heads – not all will be included.

- Vacuum cleaner with click-in battery
- Illuminated cleaner head
- Digital Motorbar™ cleaner head
- Submarine wet roller head
- Charger
- Wall dock
- A soft fluffy brush bar housed within the cleaner head. There is an electrical connector end that can attach to the end of the wand or directly to the machine.
- A brush bar located inside the cleaner head and a suction control slider located on the front.
- The illuminated cleaner head makes invisible dust visible on hard floors.
- Dyson DLS™ technology monitors brush bar resistance and adapts power across different floor types. De-tangling vanes automatically clear wrapped hair from the brush bar as you clean.
- A motor-driven cleaning head for smaller spaces.
- The charger is a one piece unit with the plug, connector end and cable.
- The Dyson cordless vacuum drops into the wall-mounted charging dock, ready for your next clean.

**Some tools may not be included.**

You can buy additional tools at www.dyson.com.

- Combination tool
- Crevice tool
- Extension hose
- Hair screw tool
- Low-reach adaptor
- Light pipe crevice tool
- Pliable bristles and felt bumper strip on a narrow, tapered tool.
- A soft dusting brush
- A brush bar located inside the cleaner head and a suction control slider located on the front.
- A flexible hose engineered from tough wire and durable plastic.
- A small cleaner head with an angled body housing the motor and an electrical connector to attach to the wand or directly to the machine.
- With an elbow joint, fitted between the bin and the tool.
- A long tool with an angled end.
- A long tool with an angled end.
- A wide, triangular shaped nozzle.
- A plastic clip that attaches to the wand.
- A rectangular dock that needs to be fixed to a wall with screws.
- A short nozzle with stiff bristles on the underside.
- A flexible joint between the machine and the tool. It must be used in conjunction with a tool or cleaner head.
- An electrical connector end that can attach to the end of the wand or directly to the machine.
- A rectangular battery with an slanted connector that slides into the handle of the main body of the machine.
- A flexible joint between the machine and the tool. It must be used in conjunction with a tool or cleaner head.
- A wide nozzle and brush, for quick switching between cleaning and dusting tasks around your home or car.
- A flexible hose engineered from tough wire and durable plastic.
- A small cleaner head with an angled body housing the motor and an electrical connector to attach to the wand or directly to the machine.
- A rectangular battery with an slanted connector that slides into the handle of the main body of the machine.
- A long tool with an angled end.

Getting started

Power modes
Your machine has three power modes for different tasks. Change power modes quickly using a single button.

Eco mode
Maximum run time for longer cleans all around your home.

Auto and Med mode
The optimum balance of power and run time. Attach your cleaner head or Hair screw tool to activate Auto mode. Suction power automatically adapts to dust levels.

Boost mode
Designed for intensive spot cleaning of ground-in dirt.

Diagram showing the connection of the wand onto the main body, with the wand release button aligned with the top of the main body.

Location of the Selection button on the screen on the filter end of the machine.

Two screens showing the machine set to Auto mode and Med mode with a blue battery showing that this will give a medium length of battery life.

Diagram showing microscopic dust particles
Measures microscopic dust particles and counts dust particles at the inlet. Attach your cleaner head or Hair screw tool and use in Auto mode to automatically increase suction power when needed.
The LCD screen

The LCD screen shows your particle count information and performance, including the cleaning mode selected, remaining run time, filter maintenance and blockage information.

Settings menu
Control the settings on your machine using the Selection button.
To enter the settings menu, press and hold the button until the menu screen appears. Tap to scroll through the options available.

Particle count and graph
Select to turn the measuring and counting of particles on and off. Turn off the measuring and counting of particles to stop your machine automatically adjusting suction power and turn off the graph.

Automatic adjustment between hard floors and carpets will continue, when using the Digital Motorbar™ cleaner head.

Adjust reactive suction power sensitivity.
Use the selection button to change how sensitive the particle count is. This will change how your machine automatically reacts to the dust particles.

For more information and support videos for your machine go online: www.dyson.com/support

Change language
To change the language on your screen, press the button and hold until the language list appears. Release the button.
Tap the button to scroll through the language list to your preferred language. Press and hold the button until the countdown ends.
A green tick will appear on the screen to show your language selection is complete.
To cancel your selection, release the button during the countdown.

Change alert settings
You can turn the alert motor pulse off. Your motor will no longer pulse but run time alert information will continue to be displayed on the LCD screen when your machine needs your attention.

Turning off alerts will not turn off the blockage alert pulsing. This is to ensure you clear any blockages, preventing damage to your machine.

Tap to scroll through the settings menu. Select the ‘Alerts’ option.
Scroll to select on or off. Hold the button until the countdown ends and a tick appears on the screen. To cancel your selection, release the button during the countdown.

Two screens, the first with the language list and then the tick screen to show that the language has been successfully changed.

The screen with an amber warning triangle to demonstrate an alert.
Run time countdown
When the battery needs charging, your machine will pulse three times and a low run time icon will appear on the screen.

When your battery is empty, a red warning icon will appear on the screen.

When Particle count and graph is turned on, low run time will be in amber and red when in Boost mode.

Battery health
To get the best performance and life from your battery, use Eco or Auto/Med mode.

Alerts
The alerts you might see are:

- Filter – the filter isn’t fitted correctly, or needs cleaning.
- Blockage – your machine has a blockage that needs removing.

Exit settings menu

Screen with Exit menu wording and return icon.
Caring for your floors

Check that the underside of the cleaner head or tool is clean and free from any objects that may cause damage.

Before vacuuming your flooring, rugs, and carpets, check the manufacturer’s recommended cleaning instructions.

The brush bar on your machine can damage certain carpet types and floors. Some carpets will fuzz if a rotating brush bar is used when vacuuming. If this happens, we recommend vacuuming without the motorized floor tool and consulting with your flooring manufacturer.
How to clean your Dyson Submarine wet roller head

Step 1
Turn off your machine and detach the Dyson Submarine wet roller head from the wand. Place it in the drip tray immediately to prevent dirty water spillage.

Step 2
Hold the wet roller head level in the drip tray.

Step 3
Hold the wet roller head over a sink. Remove it from the drip tray.
Hold the wet roller head at the edges, press the red Quick-release button and slide out the removable cassette from the main roller head.
Remove the red dirty water tank cap to empty the waste extraction tray.

Step 4
Don’t get water on the neck of the wet roller head, as it may damage the connection to the wand.
Disassemble the Submarine wet roller head. Every part of the wet roller head can be washed with water and a household anti-bacterial solution diluted according to the manufacturer’s recommended ratio.
Empty any leftover water from the water reservoir.

Step 5
Leave the wet roller to air dry in a warm, well-ventilated space.
Use a cloth to wipe away any dirt or excess water from the main roller head, waste extraction tray and water reservoir.
We recommend replacing the wet roller every six months, depending on how often you use your machine, to help maintain performance.
How to use your Dyson Submarine wet roller head

Step 1
Hold the wet roller head at the edges, press the red Quick-release button and slide out the removable cassette from the main roller head.

Step 2
Remove the cap on the water reservoir.

Step 3
Fill the water reservoir with clean water to the MAX fill line.

Detergent usage guidance: If you decide to use detergent, please choose gentle, common household detergents, and do not use bleach and high-foaming formulation. Please follow the manufacturers guidance on the recommended dilution on surfaces cleaning - Dyson does not recommend putting undiluted detergents in the clean water tank.

Step 4
Fit the cap securely on the water reservoir.

Step 5
Slide the waste extraction tray and water reservoir back into the main roller head until you hear a click. Attach the main wet roller head to your vacuum’s wand.

Remaining battery life will be displayed as a percentage on your LCD screen. You can wet clean until the water in water reservoir is running low or until the battery runs out. To continue cleaning, simply empty the waste extraction tray, refill your water reservoir, and resume cleaning.

Do not wet clean with an empty water reservoir to prevent the motor overheating.
Charging your machine

It’s important to fully charge your new machine before using it for the first time, and after every clean. This is because the battery and monitoring system’s algorithm ‘learns’ over time, and fully charging your machine helps it to more accurately calculate and display remaining run time.

Connect to the charger either directly or in the dock.

The blue LEDs on either side of the battery will flash during charging.

When the battery is fully charged, both LEDs will light for 5 seconds.

Your battery is fully charged when the display shows 100%.

Your machine won’t operate or charge if the ambient temperature is below 5°C (41°F). This is designed to protect both the motor and battery.

Changing your click-in battery

If you have additional click-in batteries, we recommend that you alternate the batteries to maintain even performance.

Removing your battery
Push the Battery release button on the handle and slide the battery off your machine.

Charge the battery.

Refitting your battery
Align your battery with the handle and slide it in. Push firmly until it clicks into place.
Emptying your bin

Empty as soon as the dirt reaches the MAX level – don’t overfill. Using your machine when the dirt is above the MAX line may affect the performance and require more frequent filter washing.

Overfilling your bin could result in inaccurate readings on the particle graph.

Remove your wand
Press the red wand release button, on the top of the wand, and pull the wand away from the bin.

Release the dirt
Hold the machine over the bin, pointing downwards.
Firmly push the red bin release button. The bin will slide down, cleaning the shroud as it goes, and the bin base will open.
The bin base won’t open if the red bin release button isn’t pushed down all the way.

Minimize dust contact
Cover your bin tightly in a dust proof bag while you empty. Remove your bin carefully, seal the bag tightly and dispose.

Close the bin
Push the bin base upwards until your bin and bin base click into place.

Cleaning your bin

Remove your bin
If it is necessary to clean your bin, empty it as shown in the ‘Emptying your bin’ section.
Press the red button located on the bin runner to release the bin and slide your bin off the runner.
Only use a damp, lint-free cloth to clean your bin.
Make sure that your bin and seals are completely dry before replacing.

Refit your bin
Insert the spine onto the bin runner.
Close your bin by pushing the bin base upwards until the bin and bin base click into place.
Your bin isn’t dishwasher safe and the use of detergents, polishes or air fresheners to clean your bin isn’t recommended, as it may damage your machine.
Clearing blockages

Disconnect your machine from the charger before looking for blockages. Be careful not to touch the trigger and be aware of sharp objects.

Leave your machine to cool down before looking for blockages.

Don’t use your machine when looking for blockages as this could cause injury.

If your machine detects a blockage, the motor will pulse and you won’t be able to use your machine until the blockage has been cleared.

If you try to use your machine when the motor is pulsing, it will automatically cut out.

Check the main body
Remove the bin and check for blockages in the main body of your machine.

Make sure any blockages are completely cleared and all parts are fitted before using your machine.

Check the wand and cleaner head
Check the wand for blockages.

Check your cleaner head for blockages, following the instructions to remove the brush bar, where necessary.

Re-assemble your machine
Refit all parts securely before using your machine.

Clearing blockages is not covered by your guarantee.

Turn the cleaner head over to check for obstructions on the brush bar and air inlet.

With the bin removed, check for blockages, paying particular attention to the air inlet, located on the right-hand side of the machine just below the point where the bin joins the main body of the machine.

With the wand removed from the machine, check for blockages at both ends of the wand.
Clearing obstructions from your Digital Motorbar™ cleaner head

Your Digital Motorbar™ cleaner head doesn’t have a washable brush bar. To maintain optimum performance, check your brush bar regularly and clear any obstructions.

Make sure your machine is disconnected from the charger and make sure your machine power is turned off.

Remove your brush bar
Don’t put any part of your machine in a dishwasher or use detergents, polishes or air fresheners.

Press the cleaner head release button on the end of the wand. Place the cleaner head upside down.

Use a coin to unlock the end cap.

Twist the end cap and remove it from your brush bar. Don’t wash the end cap.

Slide your brush bar out of the cleaner head.

Look for obstructions
Clear any debris from your brush bar.

Check inside the cleaner head and remove any debris or blockages.

Your Digital Motorbar™ cleaner head and brush bar aren’t washable. Wipe over with a damp lint-free cloth.

Don’t put any part of your machine in a dishwasher or use detergents, polishes or air fresheners.

Replace your brush bar
Push the end cap back on to your brush bar and slide it back into the cleaner head.

Turn the end cap into the locked position.

Your cleaner head isn’t washable and should only be wiped over with a damp lint-free cloth.
Clearing blockages from your Hair screw tool

Your Hair screw tool doesn't have a washable brush bar. To maintain optimum performance, check your brush bar regularly and clear any obstructions.

Make sure your machine is disconnected from the charger and take care not to touch the trigger.

Remove the cover and brush bar
Remove the Hair screw tool from the wand or machine.

Push the base plate open. Press the red lever down to release the cleaner head cover.

Pull the cleaner head cover off the main body of the tool.

Look for obstructions
Pull your brush bar firmly to remove it from the main body.

Check and remove any obstructions from all three parts of your Hair screw tool.

Your Hair screw tool isn't washable. Wipe over with a damp lint-free cloth.

Don't put any part of your machine in a dishwasher or use detergents, polishes or air fresheners.

Re-assemble Hair screw tool
Put your brush bar back into position and press firmly until it clicks back into position.

Check the red locking lever is in the unlocked position. Align the cleaner head cover with the guide on the main body. Push it down until it clicks into position.

Push the red locking lever up until it clicks into position and push the base plate back into place.
Washing your filter

Wash your filter at least once a month to maintain optimum suction power.

For more information and support videos for your machine go online: www.dyson.com/support

Twist off your filter
Twist your filter anti-clockwise and pull it away from your machine.

Tap your filter
Before washing your filter, tap it gently over a bin to remove any loose dust and debris.

Wash your filter
Wash with warm, running tap water – gently rubbing your filter with your fingers to remove the dirt.

Fill and shake
Place your hand over one end of your filter.
Fill the filter with warm tap water.
Place your hand over the open end of the filter and shake it firmly to remove trapped dirt and debris.
Repeat these steps until the water runs clear.

Shake and dry
Empty the filter and shake firmly to remove excess water.
Keep shaking until there’s no water coming from the filter.
Place your filter end up, as shown.
Place the filter on its end and leave to dry for at least 24 hours in a well ventilated, warm place.
Don’t dry your filter in a tumble dryer, microwave or near a naked flame.
Important: your filter must be completely dry before you put it back into the machine. Your machine could be damaged if used with a damp filter.

The filter is located at the rear of your machine.

Holding the filter by the hard, plastic end, tap the other end over the bin.

Filter held in upright position, with the wider end in the palm of a hand. Water running from a tap into the narrower end.

Filter with hand over the open end with arrows showing a shaking motion.

A hand holding the filter with the narrow end pointing downwards with droplets of water being shaken from the filter and again, with the end pointing downwards shaking water out.

The filter is left to dry with the pleated filter end facing upwards.
Washing your Illuminated cleaner head brush bar

Your Illuminated cleaner head has a washable brush bar. To maintain optimum performance, check and wash your brush bar regularly.

Make sure your machine is disconnected from the charger and take care not to touch the trigger.

Remove your brush bar
Don’t put any part of your machine in a dishwasher or use detergents, polishes or air fresheners.

Press the cleaner head release button on the end of the wand. Place the cleaner head upside down.

Push the end cap up fully and pull the brush bar out of the cleaner head.

Remove the end cap from the brush bar. Don’t wash the end cap.

Slide your brush bar out of the cleaner head.

Wash and dry your brush bar
Hold your brush bar under running water and gently rub to remove any lint or dirt.

Stand your brush bar upright as shown. Leave to dry completely for at least 24 hours.

Replace your brush bar
Before replacing, check that your brush bar is completely dry.

Reattach the end cap to your brush bar.

Slide your brush bar into the cleaner head. Push the end cap back down to the closed position.

Cleaning your optic lens
To maintain optimum performance, keep your optic lens clean. Only clean the lens when the cleaner head is not attached to your machine.

Use a soft, dry, lint-free cloth to wipe the lens.
Cleaning your tools

Don’t put any part of your machine in a dishwasher or use detergents, polishes or air fresheners.

Wipe with a damp, lint-free cloth, without touching the connector end.

Make sure your tools are completely dry before using.

Combination tool  Crevice tool  Extension hose  Light pipe crevice tool  Low-reach adaptor  Soft dusting brush

Stubborn dirt brush  Up-top adapter  Fabric and mattress tool
Looking after your machine

To always get the best performance from your machine, it's important to clean it regularly and check for blockages.

Look after your machine
If your machine is dusty, wipe with a damp lint-free cloth.
Check for blockages in the cleaner head, tools and main body of your machine.
Wash your filter regularly and leave to dry completely.
Don’t use detergents or polishes to clean your machine.

Look after your battery
To get the best performance and life from your battery, use Eco or Auto/Med mode.
Your machine won’t operate or charge if the ambient temperature is below 5°C (41°F). This is designed to protect both the motor and battery.

Your serial numbers
You can find your serial numbers on your machine, battery and charger.
Use your serial number to register.
For more information and support videos for your machine go online: www.dyson.com/support
